#QCmakers

The Makerspace is a new hands-on learning lab inside the Benjamin S. Rosenthal Library. We are a resource that serves and encourages students, staff, and faculty to work as individuals, with others, or with Makerspace staff on creative projects. We provide access to tools & technology that may not be easily accessible otherwise—along with a social space to interact with peers and colleagues.

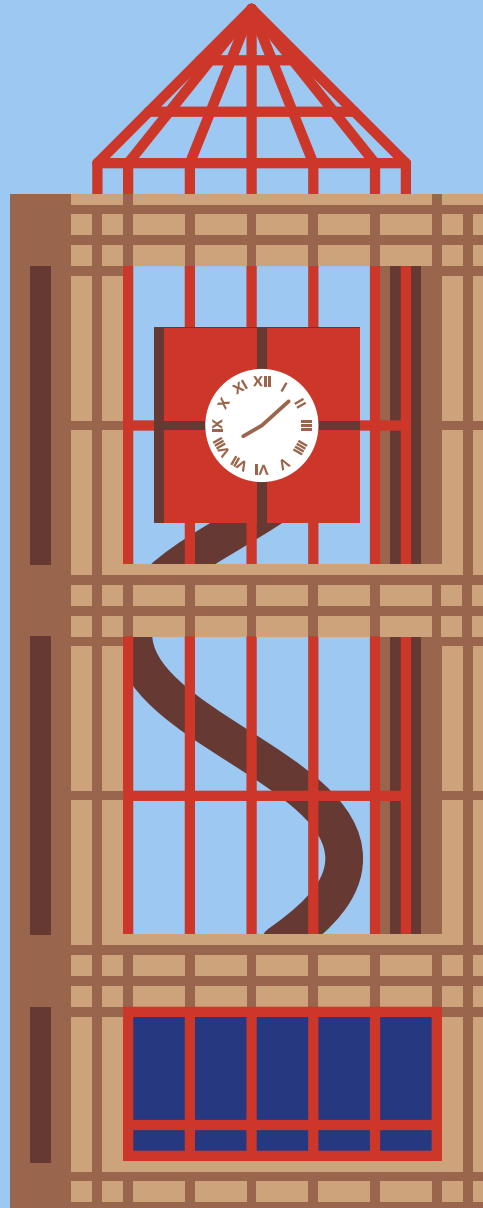

Our goal is to provide a safe working environment where students, staff, and faculty can learn through direct experimentation—as well as from each other—using technologies or pursuing activities that are otherwise unavailable through other means.

Regardless of your current aptitude or understanding of the tools & technologies we provide, you are encouraged to challenge yourself at the Makerspace to learn new things. The Makerspace is accessible to students of all majors and disciplines.

In the spirit of libraries serving as a place to gather and collaborate, our facility is an inclusive space that serves the diversity of the liberal arts students found at Queens College. We celebrate our differences and the ambition to learn new skills and ideas by working with others.

We hope you want to know more about the Makerspace and the resources we have to offer.

There is no room named 'safety' It is a state of mind.

*We are located in
Benjamin S. Rosenthal Library
Floor 1, Room 101*

We support both analog and digital tools - including but not limited to:

- digital sewing & embroidery
- hand tools & power tools
- microcontrollers & SBCs
- electronics prototyping
- laser etching & cutting
- 3D-printing
- CNC
- and more.

*Safety is paramount in the
QC Makerspace. Please scan
